

Straw Rocket

Color and cut out your rocket(s) and shooting star.
Cut out the rectangles and form into a tube large
enough to insert a straw. (Hint: roll around a pencil.)
Fold over one end and tape to seal. Tape tube to the
back of rocket or star, sealed end at the top. Leave
the bottom open and insert a straw. Blow to launch!

If you can't find a straw, cut off the end of this paper and roll up as tightly as you can (smaller than the tube on the back of your rocket). Tape to secure.
